MULTI-YEAR GUIDELINES ON THE DECENTRALIZATION OF THE PROCUREMENT, INCLUDING THE QUALITY ASSURANCE, DELIVERY, DOCUMENTATION, STORAGE, AND SAFEKEEPING OF LEARNING TOOLS AND EQUIPMENT FOR SCIENCE, MATHEMATICS AND TECHNICAL VOCATIONAL LIVELIHOOD (LTE-SM and TVL), AND THE DOWNLOADING OF THE FUNDS ALLOTTED THEREFOR

The strategy of decentralizing the procurement of aforesaid LTE in favor of either Regional Offices (ROs) or Schools Division Offices (SDOs) is to ensure better efficiency in the process by allowing LTEs, particularly those that are considered semi-expendable properties under the relevant accounting and auditing rules, and which are generally known to be available in the local market in the various provinces, to be procured and managed by the field offices concern.

26	Filter Paper, crepe, 580mm x 580 mm sheet, Grade 0905, fast *(continuation)*	a. Place the filter paper cone to the glass funnel by pressing its top edge of the cone so that it makes continous contact with the funnel. Adjust the filter cone to fit the funnel snugly. The edge of the paper should be about 1-2 cm below the rim of the funnel, as shown in Figure 7.  Figure 7 4. Using distilled water, wet the filter paper and carefully press it with a stirring rod so that it makes maximum contact with the funnel - particularly around the upper edge in the region of the tear, as shown in Figure 8.  Figure 8

Filtration Setup 6. Measure 10 mL distilled water using a standard graduated cylinder. 7. Let someone operate the stopwatch. Simultaneously/at the same time, turn on the stopwatch and pour the distilled water, using a stirring rod, to guide it into the funnel to prevent spillage until it is nearly filled to about 1 cm from the top of the filter paper to prevent liquid mixture to flow between the filter paper and the funnel.  Filtration Setup 8. Continue pouring the distilled water until the last drop has been filtered, and simultaneously, turn the timer off. 9. Take the time it takes for all the 10 mL water to be filtered. 10. Take two or more trials. **Expected Result:** The 10 mL distilled water shall be filtered in less than or within 20 seconds ± 1 second.

Materials needed to perform inspection and test Funnel, fluted, short stem with a diameter of 75 mm Filter paper Grade 0905 - with size of 120 cm x 120 cm commensurate to the diameter of the funnel, distributed to the recipient schools nationwide. Distilled water - 1 Liter 1 pc Stirring rod 1 pc Stand setup assembly 1 pc beaker/Erlenmeyer flask, 250 mL
27	Flask, Erlenmeyer, borosilicate, narrow-mouth, 250 mL	A. (Refer to General Inspection Protocol) B. Tests a) Do the refractive-index test (by submerging the glass into vegetable oil or glycerine) to determine whether the glass material is borosilicate. Borosilicate glass is identified by its refractive index, 1.474. Immersing the glass in a container of liquid of similar refractive index makes the glass not visible or will disappear. (Vegetable oil, 1.47 and glycerine, 1.473 are some liquids with similar refractive index as to borosilicate glass. b) Do volumetric test, by measuring 250 mL of water using a standard 100 mL graduated cylinder, and pouring into it; to check the accuracy and preciseness of the printed graduations and verify whether the required minimum/maximum volumetric capacity of the glass, as stipulated in the technical specifications, is met. The capacity must be 250 mL, ±5 % c) Conduct boiling point test by heating water in a beaker up to its boiling point (100° C) d) Do the scratch test: scratch using your nails the white graduations and large white enamel marking spot of the graduated test tubes to test for the peel and adhesion properties of embossed/enamelled brand and permanency of graduations, the white enamel marking spot and other markings. If the white graduations, the white marking spot and brand name and other markings are peeled off, reject the item C. Immersing the glass in a container of liquid of similar refractive index makes the glass not visible or will disappear. (Vegetable oil, 1.47 and glycerine, 1.473 are some liquids with similar refractive index as to borosilicate glass. 2. Function test by evaporation/diffusion of acetone 1. Get two watch glasses 2. Pour 10 mL water into the first watch glass 3. Pour 10 mL acetone on the second watch glass 4. Observe what happens Acetone evaporates faster than water because acetone has the weakest intermolecular forces, so it evaporated most quickly. Water evaporates most slowly because its molecules are attracted to one another by hydrogen bonding. Acetone does not participate in hydrogen bonding, so its intermolecular forces are comparatively weaker, and it evaporates most quickly. When a volatile liquid is poured on a surface, the molecules that evaporated faster are the ones with the most kinetic energy—it takes energy to jump from the liquid to a free-roaming gas state . So the molecules moving the fastest are the most likely to succeed in getting free. So, if the high-temperature molecules are all leaving, what molecules are left behind? The low temperature molecules. The liquid left behind cools down.
